ALLin™ Mega HS HiFi Mastermix, 2X

| CAT.# | SIZE | COMPONENTS | COMPONENT COMPOSITION |
|---------|-------------------|---|---|
| HLM0401 | 100 r of 50 µl | 2 x 1.25 ml - ALLin™ Mega HS HiFi Mastermix, 2X 3 x 1 ml - PCR Water | 1X mastermix contains 1 mM dNTPs, 3 mM MgCl ₂ , enhancers, stabilizers |
| HLM0405 | 500 r of 50 µl | 10 x 1.25 ml - ALLin™ Mega HS HiFi Mastermix, 2X 13 x 1 ml - PCR Water | |

Storage In the dark at -20°C.

APPLICATIONS

- Sequencing, including NGS library preparation
- Hot start PCR, multiplexing
- Fast high-fidelity PCR (up to 100 x *Taq*)
- Long PCR up to 20 kb
- Amplification of complex (GC/AT rich) templates
- Blunt-end cloning and other applications

PRODUCT DETAILS

Derived from our HiFi polymerase, the highQu ALLin™ Mega HS HiFi DNA Polymerase provides much lower error rate PCR with a 100 higher fidelity compared to *Taq*. Compared to Mega HiFi, this hot start enzyme version allows for even higher sensitivity and specificity of PCR as well as for a room temperature reaction setup, and is excellent choice for multiplex reactions. The ALLin™ Mega HS HiFi DNA Polymerase is engineered to be much faster and to generate higher yield of long PCR products up to 20 kb from complex GC-rich templates. Therefore the ALLin™ Mega HS HiFi DNA Polymerase is an excellent choice for longer and very complex PCR applications where the highest fidelity is demanded. It is an enzyme of choice for cloning and all kind of sequencing applications including NGS. Generated blunt-ended PCR products are suitable for ligation into blunt vectors.

BENEFITS

- Hot start enzyme for increased sensitivity and great multiplex results
- Fast, high yield PCR with the fidelity 100x higher than *Taq*
- Up to 20 kb long PCR even from complex templates
- Increased processivity for faster amplification and higher yield
- High thermostability for better denaturation of GC rich templates
- Best choice for NGS library prep. and other sequencing applications
- Master mix format for maximum convenience, supplied with water

PERFORMANCE

The convenience of ALLin™ Mega HS HiFi DNA Polymerase is maximized by the use of 2X Mastermix providing the additional advantage of reduced pipetting and minimized errors.

High sensitivity multiplex PCR results achieved with **Allin™ Mega HS HiFi DNA Polymerase**

Gel analysis of multiplex PCR reactions - compared to competitor enzyme (2; 5), the Allin™ Mega HS HiFi DNA Polymerase (3; 6) gives more specific multiplex result.

PROTOCOL

- Take typical measures to prevent PCR cross over contamination, keep your bench clean, wear gloves, use sterile tubes and filter pipet tips.
- Include a no-template control and positive control in parallel.
- Thaw and keep reagents on ice. Mix very well before use. Mixing of the mix is very important for the final yield!
- For complex, GC rich templates, use 99-100°C denaturation temperature, it might help to increase the yield.
- For established PCRs, try two-step cycling protocol with a combined annealing-denaturation step of 70°C (68°C to 75°C).
- Run an annealing temperature gradient (2°C increments) from 60°C to 66°C to choose the best conditions.
- The longer the amplicon, the longer the extension time: depending on the complexity of the template, perform extension from 10 sec/kb to 30 sec/kb. Longer extension for more complex templates is needed. For multiplexing, start with extension time needed for the longest fragment.

- ✓ Prepare a 50 µl reaction:

| | |
|-----------------------------------|--------------------------------------|
| Rev. & For. Primers | To 0.2 - 0.6 µM each (~2µl of 10 µM) |
| cDNA Template <i>or</i> | <100 ng <i>or</i> |
| gDNA Template | 10 - 200 ng |
| ALLin™ Mega HS HiFi Mastermix, 2X | 25 µl |
| PCR Water | to 50 µl |

- ✓ Mix gently, avoid bubbles.

- ✓ Place into the instrument set like:

| | |
|----------------------|---|
| Initial denaturation | 1 cycle: 95°C - 1 min |
| Denaturation | 25-35 cycles: 95°C - 15 sec |
| Annealing | 25-35 cycles: 60-66°C - 15 sec |
| Extension | 25-35 cycles: 72°C -30 sec (10-30 sec/kb) |

- ✓ Store probes for short time on ice, for long at -20°C.
